

# Stay connected. Work anywhere.

## Remove the complexity of owning and managing a business phone system with Cloud Unified Communications.

More than a replacement for your PBX, Access4 Unified Communications as a Service is enabling the way you need to work.

Unified Communications as a Service (UCaaS) provides seamless communications regardless of the device or location of the user.

It removes the need for capital investment in technology that ages, instead providing a pay per user per month model that everyone expects from cloud services.

**Stay ahead of the pack**

*Access4 provides the very latest features of BroadSoft, and a commitment to always stay current*

## Cloud is prevailing across your business, why not your PBX?

**Lower Costs** – No need to buy and manage equipment allowing you to focus on your business.

**Scalability** – Scale and contract as needed to meet your business requirements.

**Increased Functionality** – gain access to functions for users as and when they need it.

**Greater Reliability** – access carrier grade redundancy provided by Access4 without the cost to each user.

**MS Office 365 AD integration** – add a user in Office 365 AD and automatically add a UC service - fully provision within minutes.

## Powered by BroadSoft

**BroadSoft provides a leading telephony and united communications platform as chosen by carriers worldwide.**

Call **02 8960 8688**

# Simplified user role profiles

## Office User

Entry telephony replacement for office workers

## Executive User

Advanced telephony including mobility reach for users on the move

## Collaboration User

Unlock the power of collaboration across multiple devices

## What is UCaaS?

Through the Power of BroadSoft BroadWorks, Access4 Unified Communications as a Service (UCaaS) provides the ability to:

- Have a single bricks and mortar number across multiple devices.
- Have access to the corporate phone environment whilst not in the office.
- See users' presence and integrate with other systems such as Outlook and CRM.
- Send Instant Messages.
- Use video on demand, both one on one and group sessions.
- Share documents and workspaces in real time without the need for additional emails and the time delay.
